Project Proponent : Sri. Jacob John Vadakadom

Irrespective of the fact what is mandated in the KMMLC Rules, circulars by the Director Mining and Geology and the decisions of the SEIAA, as per the various OMs by the

MoEF& CC a mining plan is a pre-requisite for appraising the proposals for laterite mining. In fact a closer reading of the notification dated 15.01.2016 reiterates the above fact.

As regards the two recommendations in the 38th meeting of SEAC it is pointed out that the application of Kusala Kumar was for the removal ordinary earth and that of the Suresh Kumar was for removing the 3m laterite upper hard crust for making the land suitable for agriculture and not strictly a proposal for laterite mining. In fact all the applications were in the simplified application forms prescribed by SEIAA for seeking permission for excavating ordinary earth. Even if there was an omission in the past in insisting for a mining plan it is not a justification for continuing the practice. Hence the Committee decided not to amend its earlier decision.

Item No: 72.11 **Environmental clearance for the quarry project Johnson Rocks in Sy. No 781/23-1,781/1-23-1 pt, 781/1-23-2, at Athikayam Village, Naranamuzhi Panchayath, Ranni Taluk, Pathanamthitta District, Kerala by Sri.Alexander V.John (File No.1002/EC4/5032/ 2015/ SEIAA)**

Project Proponent : Sri.Alexander V.John

The Committee examined the suggestions made by SEIAA and decided to **defer** the item for site inspection.

Item No: 72.12 **Environmental clearance for removal of ordinary earth in Sy. Nos. 313/1-1 & 313/1-2 at Edamulackal Village and Edamulackal Panchayath, Punalur Taluk, Kollam District, Kerala by Smt. Mini Rajan (File No.1011/SEIAA/EC3/5175/15)**

Project Proponent : Smt. Mini Rajan

The Committee observed that it has already made an unambiguous recommendation in this regard. The statement of the proponent that he is using the dug out earth for commercial purpose does not change the primary reason for excavation namely, as noted in the NOC from the RDO, the construction of a building. Also there is no mandate for SEAC to re commend EC merely for the transportation of the removed earth. Hence the committee decided not to modify its earlier recommendation.

The meeting ended at 5.00 pm with vote of thanks to the Chairman and Members.

Project Proponent : Dr. N K Pillai, M/s Kerala Enviro Infrastructure Limited

On further examination of documents the Committee decided to seek clarification/comments of the proponent on the various issues raised in below.

- The project area has been reported to be enhanced to 3.5 hectares, but the plan enclosed in the report does not reflect any change from the original 2.5 ha. There must be document also to indicate the enhancement of the area.
- As per the recommendations of the site visit, (1) a large scale map (1: 10,000 scale) covering an area of 2 km radius around this facility was to be provided

indicating a) all man-made structures like dwelling units, road network, institutions, commercial centres etc b) natural features like water bodies and dense vegetated areas. Establishments within the limits FACT, BPCL and Info-park were to be clearly labelled. This document is not appended (2) A detailed layout (drawn to scale) of the facility especially waste storage rooms, incinerator, different kinds of waste treatment facility, pollution control devices, vehicle washing, parking, workers rooms, green belt etc is not appended (3) Storm water management plan with connectivity to nearby low lying flood plains are to be provided in the drawings (4) The capacity of the room for the storage of treated waste waiting to be taken to the landfill/recycling was to be enhanced (5) Anticipated emission from the stack was to be quantified and given. The dissipation rate with distance is not seen computed such that it is rendered harmless at the periphery (6) A plan to maximise use of solar energy (7) Additional treatment facility for liquid effluents such that it is diluted much below the permissible values considering the proximity of Kadambrayar.

- The existing rate of emission (PM 10 and 2.5) from the industry is close to the permissible limits and additional emission from the proposed CBWTF is likely to enhance the emission rate beyond the permissible levels. Hence mechanism for the strict control and monitoring is to be ensured. One of the suggestions can be to ensure that incinerators are electrically operated instead of oil firing.
- Pits for the disposal of treated sharps like needles are to be constructed with concrete lining of suitable thickness so as to prevent any type of contamination with groundwater.
- Entire Waste water including domestic waste water will be treated and the treated water will be recycled
- Daily log of incoming and outgoing material will be maintained. The in house lab shall maintain up to date the quality reports
- Parking facility for the vehicles need elaboration
- All the vehicles that enter into this facility need a certain level of cleaning/disinfection when it is taken out
- The land use map provided by the consultant shows 43% built up and 29% mangrove vegetation within 2 km of the facility. It may be verified and reported back whether 29% of the surrounding area is under mangrove vegetation

The Committee decided to **defer the item** for considering after the response from the proponent.

Outside Agenda Item
