SIA/AP/MIN/140128/2020(EC)	The ADMG letter shows that none of the 8 mines listed in the cluster boundary have no production and also not obtained EC and hence the subject mine was treated as B2. The GO No.107 is a direction to Tahasildar before allotting the government land/revenue land for mining purpose and there is no change in the earlier recommendation of SEAC.
Agenda ItemNo:146.161	1.073 Ha Lime Stone Quarry of Sri Mohammed Khayyum at Survey No. 738/2 of Piduguralla Village, Piduguralla Mandal, Guntur District, Andhra Pradesh
SIA/AP/MIN/142633/2020(EC)	The committee observed that the areas are given in acres in the cluster letter as per ADMG. The total area is less than 5 Ha hence the proposal falls under B2 category.
Agenda	0.437 Ha Gravel Mine of Sri. Vasireddy Udaya Bhaskar at Sy.No. 326/A, Sekuru

BS

15th - 19th September 2020.

ItemNo:146.162	Village,Chebrole Mandal, Guntur District, Andhra Pradesh
SIA/AP/MIN/14389 7/2020(EC)	The lease permit letter dt:15.11.2019 has been examined and SEAC agrees with the SEIAA. The permit is valid for 60 days as per the letter. As the time is expired, the issue of EC does not arise.
Agenda ItemNo:146.163	1.796 Ha. Kristipadu Dolomite & Steatite Mine of M/s. Sri Ram Mining Company at Survey No. 605, 606, 607/D2, 607E/2 & 607/F3 of Kristipadu Village, Pedda Vaduguru Mandal, Ananthapur District, Andhra Pradesh
SIA/AP/MIN/47796 /2019(TOR)	<p>The proposed mine is underground mine, the proximity of the village was clarified by the proponent in the reply letter dt:01.08.2020 as</p> <p>“When the surface distance is measured from the lease boundary, the distance is ascertained as 30 meters. It may kindly be noted that the effect on the surface structures, due to underground mining operations is primarily due to subsidence factors only. While designing the mining operational limits the angle of draw has been taken into consideration. The zone is defined with an angle of 370 from the center of the deepest level. This center is falling at a distance of 55 meters from the western boundary. The village thus falls at a distance of 85 meters from the center of the western deposit where the calculation of angle of draw is taken into consideration. The angle mentioned above when drawn for the angle of draw, ends at point PBH-5. From this point the habitat boundary is still 37.5 meters. Thus the mining subsidence if any will not affect the village in any case. Apart from this the blasting is done in a controlled manner and the body waves generated due to blasting will loose their velocity in the upper zone of the overburden due to the weathered nature of the material. Thus the distance factor in the present case will not be affecting as the mining method proposed is underground method.”</p> <p>The recommendation of SEAC is for issuance of TOR but not EC. After EIA & EMP further appraisal will be made and issue of EC will be decided.</p>
