vermi composting method.

7. As per the proponent, the excess treated sewage will be utilized for irrigation in the adjoining lands.

The proposal was placed in the 102<sup>nd</sup> SEAC meeting held on 01.02.2018. The SEAC members interacted with the proponent regarding the environmental compliance of the project. Specifically, the following recommendations are made for compliance by the project proponent.

1. The organic part of the municipal solid waste should be treated in organic waste convertor and the resulting manure should be used for gardening in the project area. This should be done within the project area.
2. The proponent informed that 1112 KLD of treated sewage needs to be disposed appropriately. The proposal submitted by him was to use this treated sewage for agricultural purposes in the adjoining land owned by private farmers. For this purpose, it is estimated that 32 Ha of land will be required. In response to SEAC query, the proponent submitted the letters of interest from 20 farmers who possess a total of 21.14 Ha. Still there is a shortage of 11 Ha of land to meet the requirement. The SEAC directed the proponent to identify the balance required land of 11 Ha and submit the list to SEIAA within 10 days.

In this regard, the proponent informed the SEAC that in the coming years (within 3 years), the sewer line of Erode municipality will be ready closer to the project site and the unused treated sewage will be discharged into this sewer as and when it is made available. Therefore, the use of treated sewage

for land irrigation is only a temporary measure.

Based on the above deliberations, the SEAC decided to recommend the proposal for grant of Environmental Clearance to SEIAA subject to the above conditions in addition to normal conditions.
