- The applicant submitted the clarification on 11.08.2015 i.e. letter by enclosing copy of the plate – 1 in the Mining plan showing 5 years production plan and sections. In the letter, the applicant mentioned that, the total waste generation for 10 years is 81000 m³ and the dump area is 5400 m² towards Northwest side with average height of 30 m for 10 years. The proponent also submitted the proposed dump plan for future as follows:
- Originally the AMP (Approved Mining Plan) had earmarked an area of 2700 Sq.mt towards Northwest side that was sufficient for dumping generated waste for the first 5 years of production that is first mining plan.
 - During the first mining scheme that is from 6th to 10th years of production, the waste will be dumped in continuation to the existing dump towards northwest to east side which measures another 2700 Sq.mt.
 - By the end of the 1st scheme i.e., at the end of mining operations after 10 years, the quarry will reach appreciable depth which will be back filled with the material dumped during 1st to 10th years. This will make the area of dump clear such that fresh mining area will be exposing for the next 10 years.
