In the light of recommendation of SEAC the SEIAA resolved to grant Environmental Clearance; however the Project Proponent is required to re-examine and recalculate the stack height proposed in its EMP on following counts:-

- I. Stack height calculation does not appear correct, as Sulphur content in spentwash is more than 01%.
- II. Based on recalculated stack height the incremental GLC shall require recalculation and resubmission.
- III. Project is having existing sugar mill adjacent to proposed distillery project site Existing stack and emission details of Sugar Mill appears not have been considered in the Air Dispersion Modelling, therefore submission of cumulative incremental GLC due to both existing (Sugar mill) and proposed (distillery) stacks is required.
- IV. Emission Load (as per CPCB guidelines) due to vehicular movement has not been calculated and incorporated in the EIA / EMP Report same requires resubmission for emission load of vehicular movement with reference to CPCB guidelines.
- V. In air dispersion modeling emission, load due to vehicular movement requires to be considered therefore Dispersion modeling including emission load due to vehicular movement requires resubmission.
