

**PROCEEDINGS OF THE MEETING OF STATE LEVEL EXPERT APPRAISAL
COMMITTEE, ODISHA HELD ON 28TH, 29TH & 30TH DECEMBER, 2023**

The SEAC meetings held on 28th, 29th & 30th December, 2023 at 03:30PM through Video Conferencing (VC) in Google Meet under the Chairmanship of Sri Sashi Paul. The following members were present in the meeting.

- | | | |
|-------------------------------|---|-----------------------|
| 1. Sri Sashi Paul | - | Chairman (through VC) |
| 2. Dr. K. Murugesan | - | Member Secretary |
| 3. Dr. Rabi Narayan Patra | - | Member (through VC) |
| 4. Dr. Chittaranjan Panda | - | Member (through VC) |
| 5. Prof. (Dr.) H.B. Sahu | - | Member (through VC) |
| 6. Prof. (Dr.) Abanti Sahoo | - | Member (through VC) |
| 7. Er. Fakir Mohan Panigrahi | - | Member (through VC) |
| 8. Prof. (Dr.) B.K. Satapathy | - | Member (through VC) |
| 9. Dr. K.C.S Panigrahi | - | Member (through VC) |
| 10. Shri Jayant Kumar Das | - | Member (through VC) |
| 11. Dr. Ashok Kumar Sahu | - | Member (through VC) |
| 12. Er. Kumud Ranjan Acharya | - | Member (through VC) |

Draft proceedings of the meeting was finalized by the members through e-mail and also final proceedings of the meeting was confirmed by the members through e-mail. The agenda-wise proceedings and recommendations of the committee are detailed below.

A. CONSIDERATION OF MINOR MINERAL PROPOSALS (NEW) – 21 Nos.

The committee verified 21 nos. of minor mineral proposals forwarded by the SEIAA, Odisha. The case-wise proceedings and observations of the committee are detailed in Table as per Annexure – A. The proposals of following categories are examined:

Total no. of proposals	Type of proposals	No. of proposal	Decisions of the committee
21	Stone Quarries and other (12)	06	Clarification to be sought from the concerned Tahasildar.
		06	The SEAC considered the proposals as B2 category and recommended for Environmental Clearance.
	River Sand (09)	04	Clarification to be sought from the concerned Tahasildar.
		03	The SEAC considered the proposals as B2 category and recommended for Environmental Clearance.
		02	SEAC recommended reject/return EC for the proposal.

P.T.O...

B. CONSIDERATION OF MINOR MINERAL PROPOSALS (COMPLIANCE RECEIVED)- 05 Nos.

The committee verified 05 nos. of minor mineral proposals (compliance received). The case-wise proceedings and observations of the committee are detailed in Table as per Annexure – B. The proposals of following categories are examined:

Total no. of proposals	Type of proposals	No. of proposal	Decisions of the committee
05	Stone Quarries and other (04)	03	Clarification to be sought from the concerned Tahasildar.
		01	The SEAC considered the proposals as B2 category and recommended for Environmental Clearance.
	River Sand (01)	01	Clarification to be sought from the concerned Tahasildar.

C. CONSIDERATION OF MODIFICATION OF EC PROPOSALS – 32Nos.

The recommendation of SEAC for modification of Environmental Clearance for 32 minor mineral proposals is as per Annexure - C.

D. CONSIDERATION OF MODIFICATION OF EC PROPOSAL COMPLIANCE RECEIVED – 01No.

The recommendation of SEAC for modification of Environmental Clearance (compliance received) for 01 minor mineral proposals is as per Annexure - D.

E. CONSIDERATION OF NEW (COUNTRY LIQUOR) PROPOSAL RECEIVED – 01 No:

The recommendation of SEAC for Environmental Clearance for 01country liquor proposal is given at Annexure- E.

F. RE - CONSIDERATION OF CATEGORY B1 PROPOSAL RETURNED FROM SEIAA – 01 No.:

The following proposal which has already been appraised in SEAC Meeting dated 01-12-2023 was referred back from SEIAA after 01-12-2023, hence included in this proceedings.

PROPOSAL FOR ENVIRONMENTAL CLEARANCE OF M/S. SAHU METALIKS PVT. LTD. FOR BIRUPA RIVER SAND QUARRY, BHAIRPUR OVER AN AREA OF 5.058 HA. IS LOCATED IN MOUZA - BHAIRPUR, TAHASIL – SALIPUR, IN DISTRICT - CUTTACK OF SRI AMRIK SINGH – EC

1. This proposal is for Environmental Clearance of M/s. Sahu Metaliks Pvt. Ltd. for Birupa River Sand Quarry, Bhairpur over an area of 5.058 ha. is located in Mouza - Bhairpur, Tahasil – Salipur, in District - Cuttack of Sri Amrik Singh.
2. **Category:** The project falls in category "B" under Schedule of activity 1(a)-Mining of minerals as per the EIA Notification,2006 and its subsequent amendments.
3. The Letter of Intent (LOI) was granted to Sri Amrik Singh vide letter No.383 dated 03.02.2018 for the period of 5 years by Tahasildar, Salipur.

4. This Mining Plan is approved vide letter No. 7847/DG dated 28.04.2018 by the Directorate of Geology, Bhubaneswar, Cuttack District.
5. Mining lease is an identified sairat source in the Cuttack DSR in Annexure – I, Sl.No. – 24.
6. **TOR details:** Terms of Reference (TORs) has been granted by SEIAA, Odisha vide No – 1265/SEIAA dated 09.04.2021.
7. **Public hearing details:** The Public Hearing was held on 09.03.2022 at the playground of Bhairpur mouza situated near Tarini Mandir under Salipur tahasil in Cuttack district. The villagers did not raise any specific issues on the environment. Budget earmarked for the action plan of public hearing is Rs. 3 lakhs.
8. **Location and connectivity:** The Proposed Sand Mining Project is located at Birupa River Sand Bed in Plot No.- 01, Khata no. - 655, over an area of 5.058 ha., Kissam- Nadi, of Bhairpur-Village, Salipur-Tahasil, Cuttack-District, Odisha-State. The said lease is located in survey of India Topo Sheet No. F45T14, bounded by Latitude: 20° 30' 44.70" to 20° 30' 51.02" N, Longitude: 85° 58' 43.02" to 85° 58' 55.56" E. The Lease area is accessible from SH 9A at a distance of 1.75 km, which is well connected to National Highway - 5. The nearest railway station is Nirgundi at distance 3.5 km from the lease area. Nearest airport is Bhubaneswar airport at a distance of 35 Km from the mining lease area.
9. **Topography and drainage:** The general topography of the area around the mine site is general plan agricultural land along the river. The area constitutes almost alluvial plain without any conspicuous topographical features and forms a part of the vast Indo-Gangetic plain. The proposed area is undulating. The flow rate of the river varies with the quantity of precipitation in the catchment area. The lease area surrounded mostly with agricultural lands. There is no major impact of mining on the topography of the area. The mining lease area in riverbed will be replenished with sediments after monsoon and the area which in agriculture field will be reclaimed after mining. Drainage system in the region is dendritic. General flow direction of Birupa River is from west to east.
10. **Baseline study:** Baseline study was conducted during Mar to May 2021 (Pre-monsoon Season) around 10km radius of mine lease boundary
 - a) **Ambient Air quality:** Ambient air quality of the study area has been monitored at 8 locations for 12 air quality parameters. The AAQ analysis indicates that the concentration of PM10 varied from 46 to 66 $\mu\text{g}/\text{m}^3$, PM2.5 from 25 to 58 $\mu\text{g}/\text{m}^3$, SO₂ from <4 to 8.8 $\mu\text{g}/\text{m}^3$, NOx from <9 to 13.9 $\mu\text{g}/\text{m}^3$. Benzene, BaP, Ni, As, & Pb were found below detection limit.
 - b) **Noise quality:** Near industrial area day and night noise levels are 45.8 dB (A) to 44.2 dB (A). In residential areas daytime noise levels varied from 51.2 dB (A) to 47 dB (A) and nighttime noise levels varied from 41.9 dB (A) to 38.5dB (A) across the sampling stations. The field observations during the study period indicate that the ambient noise levels are well within the prescribed limit by CPCB (55 dB (A) Day time & 45 dB (A) Nighttime).
 - c) **Surface water:** pH values varied between 6.9 to 7.1 while Turbidity varies from 8.2 to 11.0 NTU, Dissolved Solids varied from 86 to 94 mg/L, Dissolved oxygen varies from 7.0 to 7.1 mg/l, BOD varied from 1.5 to 1.7 mg/l and Chloride values varied between 12 to 13.4 mg/l. Iron values varied from 0.23 to 0.28 mg/l, Manganese values varied below 0.02 mg/l. Sulphate values varied from 11 to 13.6 mg/l and Nitrate values varied from

1.2 to 2.3 mg/l. Zinc 0.1 to 0.12 mg/l. Copper below 0.05. Fluoride, Arsenic, Lead, Chromium, Cyanide, Selenium, Fluoride, Phenolic compound and Cadmium have been observed below detection limit and Total Coliform varies from 162 to 279 MPN/100 ml.

d) **Ground water:** pH values varied between 7.0 to 7.3 while Dissolved Solids varied between 174 to 186 mg/l and total hardness varied from 89 to 94 mg/l. Chloride values varied between 6.2 to 6.7 mg/l. Calcium values varied between 22.1 to 28.1 mg/l while Magnesium values varied between 5.3 to 5.9 mg/l, Sulphate values varied from 2.1 to 3.5 mg/l and Nitrate values varied from 2.5 to 3.2 mg/l. Zinc values varied below 0.05 mg/l & Boron value below 0.01 mg/l. Lead, Copper, Manganese, Fluoride, Mercury, Cadmium, Cyanide, Arsenic, Selenium, Chromium, Phenolic compounds and Aluminum have been observed below detection limit.

e) **Soil quality:** The pH of the soil samples ranged from 6.4 to 6.6. Indicating that the soils are slightly acidic to moderately alkaline in nature. Nitrogen content ranged from 0.07 % to 0.09 %. Potassium ranged from 0.08 % to 0.09 %.

11. **Total reserves and production:** As estimated, geological reserve of sand is 35140 CuM and mineable reserve is 31224 CuM. During the plan period, a total of 23200 CuM (4640 cum/annum) sand will be extracted. At the end of the plan period the quarry level will be 23 m RL.

12. **Replenishment study:** The pre-monsoon data on was carried out in date 10.06.2022 by using DGPS Survey Method and the post monsoon data on 05.12.2022 by using UAV/ Drone Method. Considering the safe workable area for pre- monsoon and post-monsoon survey was 12045.92 m². It is estimated that during Pre-monsoon the extractable sand available is 11565.96 m³ and during Post-monsoon the extractable sand available is 11436.94 m³. It is observed that erosion of 164.92 m³ has been done with average thickness of 0.013m.

13. **Method of mining:** The winning of mineable reserve of sand of Birupa River Sand Quarry' Bhairpur will be carried out by opencast by manual dry pit mining method. Sand is to be excavated in layers up to a depth of 1.0m. No machines are proposed to be deployed to carry out wining of sand. Total handling of sand from excavation screening stacking and loading to the user carriers like tractors/Tippers will be done manually. To maintain safety and stability of riverbanks a safety distance of 3m or 1/10th of the width of the river on both side of riverbank will be left as per sustainable sand.

14. **Water requirement:** Total water requirement will be about 1 KLD and which will be required for different purposes like domestic, dust suppression, plantation purposes & sourced from private suppliers.

15. **Power/Fuel requirement:** Minimal power required for office shall be taken from the General Electric supply of the area. The approximate quantity of the fuel used per day is 0.014 KLD diesel is required as fuel.

16. **Greenbelt:** It is proposed to plant 50 Nos. per year of native species (250 Numbers of native species will be planted during the 5-year plan period) along with some fruit bearing and medicinal trees during the plan period and a budget of Rs. 0.5 Lakh for plantation is given in EMP.

17. **Manpower requirement:** 11 nos. of person are to be employed daily for the manpower requirement of the proposed project.

18. **Project Cost:** The project proponent will incur a total cost of Rs. 50.00 Lakhs. This will include cost of labour, cost of transportation, fuel charges etc. 2.0 % of capital cost has been earmarked towards CSR which is Rs 1.00 Lakh. Capital & recurring cost estimated for environmental management is Rs. 3.0 Lac & Rs.1.0 lakhs respectively.

19. **Environment Consultant:** The Environment consultant M/s EHS 360 Labs Pvt. Ltd., Chennai along with the proponent made a presentation on the proposal before the Committee on 12.06.2023.

20. The SEAC in its meeting held on 12-06-2023 recommended the following:

A) The proponent may be asked to submit the followings for further processing of EC application;

- a) Revised replenishment study report as present replenishment study is done in DGPS for pre-monsoon and Drone method for post monsoon which aren't comparable to one another. Further the replenishment study report is representing negative data/erosion.
- b) Latest KML file as the present KML file is showing two distinct patches of sand in between the water body.
- c) Detail note on Transportation of sand from proposed quarry to river embankment and mention type of road to be used for transportation.
- d) Cross section details and net loss of sand shall be clarified.

B) The proposed site shall be visited by Sub-Committee of SEAC to verify the followings;

- i) Environmental settings of the lease area.
- ii) Availability of sand within the lease area.
- iii) Mining activity, if any carried out in the lease area.
- iv) Road connectivity to the lease area.
- v) Distance of the road and railway bridge from the boundary of the lease area.
- vi) Cluster approach if any.
- vii) Distance of embankment from sand deposit.

21. The proposed site was visited by the sub-committee of SEAC on 14.07.2023. Following are the observations of the sub-committee

- a) PP, RI and Consultant were present along with other team members. The Mine is in Birupa River. The lease area was shown by the RI. This is a new sand mining proposal. It was observed that although grass and bushes are present in the lease area, there is enough sand available for mining. **Sand mining can be done after removal of bushes and grass with condition that these removed things should not be deposited on the river bed within both side flood embankments.**
- b) There are no ongoing mining activities in the lease area.
- c) As this is new sand mine lease and drone survey has been done recording levels as shown by consultant during visit, PP may be asked to provide information on LWL at lease site from competent authority of Water Resources Department and assess the minable sand quantity basing on LWL.
- d) The site is presently approachable from Peer bazar on Jagatpur to Salipur Road and also from Jagatpur on NH16 (before Birupa bridge on NH 16). Road from Peer Bazar is

narrow and passing through a number of villages and may not be suitable for commercial transportation of sand. The road approachable to NH 16, is suitable as it passes through one small village with few houses. For transportation of sand, a portion of Pattamundai canal embankment (which is also flood embankment) is proposed for use by PP which is a narrow moorum surface road. Light commercial vehicles (Tractors/ Mini truck etc. not exceeding 3 cum capacity) can be allowed for transportation. **Use of tippers as proposed in methods of mining may not be allowed.** However, the Water Resources Department being the authority of this canal-cum-flood embankment, permission from competent authority of this department for use of the embankment road as well as the approach road from lease area to the embankment by PP for transportation of sand is required for grant of EC and PP may be asked to obtain such permission. PP may also be asked to furnish the actual length of transportation on canal-cum-flood embankment.

- e) No bridge or high-tension line is visible near the lease area. The PP may be asked to provide the distance of nearest bridge from lease area.
- f) There is no other sand mine under operation near the lease area. R.I. explained that there is no other sand mine proposed near the lease area. PP was asked to submit required certificate from Tahasildar to justify that this lease area is not coming under cluster approach.
- g) The lease area appears to be about 200-meter distance from embankment. PP may be asked to provide a sketch indicating actual distance from canal-cum-flood embankment
- h) PP was asked to submit required documents as asked during presentation.

22. The proponent has furnished the compliance and the SEAC verified the same as follows:

Sl. No.	Information Sought by SEAC	Compliance furnished by the proponent
1.	Revised replenishment study report as present replenishment study is done in DGPS for pre-monsoon and Drone method for post monsoon which aren't comparable to one another. Further the replenishment study report is representing negative data/erosion.	In DGPS survey method, we have taken cross section points of each section & by using Virtual Surveyor software, calculated the volume and compared with the volume, outcome from the Drone Survey method. Earlier 2 patches out of 3 patches were considered for volume calculation as the third patch was covered with grass (as shown in Image 1). AS a result, we found erosion. Presently, the revised Replacement report has been prepared considering all aspects and attached as Annexure – A. however, Alluvial soil and silt deposited under grass growth during flood shall be stacked separately for plantation purpose of nearby area.
2.	Latest KML file as the present KML file is showing two distinct patches of sand in between the water body.	Initially, the lease area was a single patch and the flow of water on the northern area of lease area (Image – 2). But due to non-mining activities from the main flow, gradually another flow entered the lease area and bisected the area (as shown in image – 3). However, excavation will be restricted to Patch 2 & 3 only.

Sl. No.	Information Sought by SEAC	Compliance furnished by the proponent
3.	Detail note on Transportation of sand from proposed quarry to river embankment and mention type of road to be used for transportation.	Daily 3 – 4 nos. of only tractor (3 cum capacity) will be used for transportation of sand. Covering a distance of 400m Govt. land from the proposed quarry, it enter the canal road & continue for 5 km then it touches NH-16 (as shown in image - 4). However, if required, NOC from Irrigation Dept, will be obtained for use of canal road.
4.	Cross section details and net loss of sand shall be clarified.	Cross section details given in Replenishment report, which shows, there is net replenishment of sand. But during estimation of sand volume, some portions were not considered due to grass growth. After considering due to grass growth. After considering all it shows a replenishment of 1741.45 cum within safe mineable area. This is a fresh mining lease and no mining has been done earlier, So after excavation only, the exact rate of replenishment can be estimated.

23. The proposal was placed in the SEAC meeting held on 18.08.2023 and the SEAC observed and recommended the following:

- i) In the replenishment study report submitted by PP there was net loss of sand and clarifications were sought. On asking clarification figures are changed to make it positive without sufficient details and justification. Moreover two different methods are employed for Pre and post monsoon study which are not comparable. Figures are changed arbitrarily in each of the communication without any supporting documents or data. This whole thing makes it difficult to accept. Hence, replenishment study report is rejected.
- ii) In view of net loss of sand in replenishment study report and unsatisfactory compliance it is recommended to return the proposal to SEIAA to take further action.

24. The proposal was placed in 139th SEIAA meeting held on 16.10.2023 & 17.10.2023 and after detailed deliberation on the matter, the Authority peruse the recommendation of SEAC & the replenishment study is rejected. The PP is required to submit replenishment study report in accordance with Sustainable sand mining guidelines-2016 and Enforcement & Monitoring Guideline for sand mining-2020 issued by MoEF&CC, Gol. Accordingly, ADS letter issued to PP on 08.11.2023.

25. Now, the PP has submitted its reply vide letter no. Ref no-SMPL/BB/1205 dt. 08.12.2023 uploaded in Parivesh Portal on 10.12.2023.

26. The proposal was placed in 146th SEIAA meeting held on 11.12.2023. After detailed deliberation in the matter the authority decided that the revised ARRS report may be referred to SEAC for their considered views.

27. The SEAC observed the following:

- (i) Pre and post monsoon surveys have been carried out in 05th December 2022 and 27th November 2023 respectively. (Ref. Page 15 of replenishment study report).

- (ii) Photogrammetry drone survey method has been used to arrive at the difference in elevations of the riverbed sand during the survey periods using Digital elevation model / Surface terrain model.
- (iii) There is no mention of Ground control points locations and their error estimates in the replenishment study report. However, error estimates of the survey of pre and post monsoon measurements have been given in Annexure 1 and 2 respectively of the above-mentioned report. The reported accuracy during pre and post monsoon surveys is 4.89019 – 5.958423 cm, 2.86971 – 3.91021 cm and 3.59292 – 7.33967 cm in X, Y and Z directions respectively.
- (iv) The replenished volume of sand has been reported to be 6817.9 cum in the safe workable area based on average estimated elevation difference of 0.4 meters. This is a new mine. Project proponent in its approved mining plan is requesting for mining of 4840 cum of sand in the first year.
- (v) In the previous report Pre monsoon survey was conducted on 10.06.22 with DGPS and Post Monsoon survey with Drone on 5.12.22. Now another Drone survey is conducted on 27.11.23 and data of 5.12.22 is compared with data of 27.11.23 to arrive at replenished quantity. However, both data of 5.12.22 and 27.11.23 are for post monsoon period and for two different years. Hence this cannot be accepted.
- (vi) Dates of pre-monsoon and post-monsoon survey are not proper. Pre-monsoon survey was carried out on 05.12.2022 & Post-monsoon was on 27.11.2023.
- (vii) Pre monsoon study carried out on 05.12.2022 and Post monsoon study carried out on 27.11.2023 almost after one year.

After detailed discussion, the SEAC reiterates its earlier recommendation that replenishment study report submitted found to be unsatisfactory and it is recommended to return the proposal to SEIAA to take further action.

MEMBER SECRETARY, SEAC

TABLE**DECISION ON MINOR MINERAL PROJECTS WITH LEASE AREA LESS THAN 5 HA.
ON 28th, 29th & 30th December' 2023**

Sl. No	SEIAA File No.	Name & Address of the proponent	District	Type of Mineral	Name of the project	Mining lease period	Details of other mines including lease area located within 500 m from the periphery of the proposed mine lease area	Observation of SEAC based on Form-I, Pre-feasibility report, approved mining plan and checklist	Whether general condition apply	Maximum annual production capacity (in m ³)	Recommendation of the SEAC

2.	SIA/O R/MIN/ 41150 9/2022	Tahasildar Kamakhyana gar (Lessee) M/s. Badasari Laterite and Morrum Quarry At/Po- Kamakhyana gar Dist: Dhenkanal Pin: 759018 Email: tah.kamakhy a-od@nic.in	Dhenkanal	Laterite and Morrum	Proposal of Environmental Clearance for Badasari Laterite and Morrum Quarry over an area of 9.00 acres is situated on Khata no- 330 & pot no- 2355 of mouza Annapurnapur Khamar (Kha), Tahasil- Kamakhyana gar, Dist- Dhenkanal of Tahasildar Kamakhyana gar - EC	05.08.2023	I. Certificate from concerned DFO that there is the proposed quarry is not included in the DLC list. II. Concerned DFO needs to ascertain the availability of trees and vegetation within proposed	Khata no. 330, plot no.- 2355, Mouza – Annapurnapur Khamar (Kha), Kissam – Parbat - 2 has not been included in the DLC report. The copy of DLC report submitted by Tahasildar, Kamakhyana gar Dt. 22.07.1997 is enclosed. Some portion of the area one side about 25 to 30% of the area are covered with Misc Forest Growth and 110 nos of Misc trees having girth 30cm are existing.	(iii)The PP is required to specify the blasting schedule and safety precautions against fly rocks and ground vibration. As per the letter of DFO the particular lease is not included in the DLC list. Moreover, 30% of lease area is covered with forest growth having big trees. Hence, a fresh demarcation of lease area is essential to arrive at a safe working zone without hampering the forest growth. Therefore, the SEAC decided to consider the proposal for EC after submission of : (i) The trees present in 30% of lease area should not to be disturb due to mining activities. These trees can be

					EC		water table in rainy and summer season.	in rainy season is at 605mRL & the ground water level in summer season is at 601 mRL	
							4) The proposal mentions use of non-explosive blasting agents. Hence no permission is needed for use of blasting explosives.	However, The proposal mentions use of non explosive blasting agents but to meet the production target of 12542 Cum/Annum is deemed unattainable through non-explosive methods, the operations will only resort to the use of explosive blasting agents. In such cases, the blasting will carried out with DGMS certified license holders (Blasters) to ensure safe and regulated use of explosives agents.

Modification of EC as per the Replenishment Study Report 2. Amendment of EC was granted vide letter no. 5320 dated 02.09.2022. 3. SEIAA has permitted for 3120cum/year for sand extraction for 2nd year followed by submission of Replenishment Study Report. 4. Both Pre monsoon (08.04 2023) and Post Monsoon (01.11.2023) has been carried out by Drone survey method. 5. Considering a common safe workable area of 0.170ha, available replenishment sand volume after post monsoon survey is 706cum. 6. The PP has proposed for 706cum as per Replenishment Study Report. 	<p>The SEAC observed the following:</p> <ol style="list-style-type: none"> 1. The elevation of contours in pre-monsoon and post-monsoon survey not visible for comparison. 2. In the surface geological map shown soil mixed sand (sandy soil), vegetation and cropland in lease area. The sand safe mining area output may be calculated leaving the areas accurately. 3. The elevation of contours in pre-monsoon and post-monsoon survey not visible for comparison. 4. RSR shows erosion in post monsoon in lease area as volume in pre monsoon is more and post monsoon as less. Pre and post 680 and 200 cum respectively in Page-22. <p>SEAC Recommendation: PP to explain the erosion in post monsoon data and replenishment calculated. NABL approved lab report is required for usefulness of the recorded sand mixed with soil category as proper sand and the useful material volume available may be computed accordingly. As such the sand replenishment study report indicating erosion in the mines are past post monsoon could not be accepted for grant of Modification of EC.</p>
