1. Introduction:

The Government of India, Ministry of Environment, Forests and Climate change has made certain amendments in Environmental Impact Assessment (EIA) Notification No. S.O.1533 (E) dated: 14.09.2006 issued by the Ministry of Environment and Forest vide notification no. S.O.141 (E) dated 15.01.2016 and notification no. S.O. 190(E), dated: 20.01.2016. These amendments led to the constitution of the District Level Environment Impact Assessment Authority (DEIAA) at district level for grant of environmental clearances for category B2 projects (B2 category projects pertaining to mining of minor minerals of lease area less than or equal to 5 hectares) for mining of minor minerals, for all the districts in the country. DEIAA comprises following members:

Ordinary sand other than sand use for prescribed purposes and some other minerals have been specified as minor mineral in Sec 3(E) of the Mines and Minerals (Development and Regulation) Act, 1957. The Central Government in addition to some other minor minerals have also declared the ordinary earth (used for filling or levelling purposes in construction or embankments, roads, railways and buildings) and brick earth as the minor minerals. The Government of Punjab vide notification no. S.O.22/P.A.9/1996/S.3/2008 dated: 28.03.2008 have acquired the rights of ordinary clay, ordinary sand other than sand use for prescribed purposes, brick earth and ordinary earth (used for filling or levelling purposes in construction or embankments, roads, railways and buildings) in addition to some other minor minerals.. The DEIAA shall base its decisions on the recommendations of District Level Expert Appraisal Committee (DEAC). It comprises of following members

District Survey Report (DSR) is required to identify the areas of aggradations or depositions where mining can be allowed and identification of areas of erosion and proximity to infrastructural structures and installations where mining should be prohibited and calculation of annual rate of replenishment and allowing time for replenishment after mining in that area. The District Survey Report (DSR) shall form the basis for application for environmental clearance, preparation of reports and appraisal of projects.

The main purpose of preparation of District Survey Report is to identify the mineral resources and mining activities along with other relevant data of the District. This report contains details of Lease, Sand mining and Revenue which comes from minerals in the district. This report is prepared on the basis of data collected from different concerned departments. The Report shall be updated once every five years.

Kurnool is transformed from Khandenavolu as earlier referred to in the literature of the past (SOI District Planning Series Map, 1995). Kurnool falling in Rayalaseema region which was erstwhile capital of Andhra State carved on linguistic basis with headquarters at Kurnool Town. Kurnool is located 190 kilometres south of the state common capital Hyderabad, 310 Kilometers SW of State capital Amaravathi and is on the south bank of Tungabhadra River.

Kurnool District is one of the 13 districts in the state of Andhra Pradesh, India. The district is located in the west-central part of the state and is bounded by Mahabubnagar district of Telangana in the north, Raichur district of Karnataka in the northwest, Bellary district of Karnataka in the west, Ananthapur district in the south, YSR Kadapa district in the South East and Prakasham district in the east. The city of Kurnool is the headquarters of the district. It has a population of 4,053,463 of which 28.35% were urban as of 2011. The district is the 10th largest district in the country and the 2nd largest district in the state, accounting for 17,658 square kilometres (6,818 sq miles). The district encompasses the Srisailem Dam and Nallamala Hills. The district lies between the $14^{\circ}55'$ and $16^{\circ}07'$ North latitudes and $76^{\circ}59'$ and $78^{\circ}50'$ of the East longitude and falls in Survey of India Toposheet No's. 56L, 57A, 57E, 57I & 57J.

Bethamcherla and Dhone are the leading Industrial towns in Kurnool district of the Indian state of Andhra Pradesh. They are located in Kurnool Mandal of Kurnool revenue division. Kurnool district is source of raw material to many cement factories, Kadapa Slabs, Mineral Processing units (Limestone, Steatite, Shale, Clay, Mosaic Chips etc.,). Banaganapalle is located 73 km from Kurnool.

Kurnool is considered to be one of the districts, endowed with rich history, minerals, Flora and Fauna. Mineral resources in the Kurnool district in geological parlance are widely distributed in time and associated with rocks from Archaean to Kurnool Group of rocks. Limestone, Dolomite, Iron ore, Lead, Ochre, Steatite, Barytes, Quartzite, Diamonds, Gold, Copper, Phosphate, Pyrite, Quartz, Coloured Granite, Black Granite, Napa Slabs and Mosaic Chips. Cement grade limestone, black granites and Kadapa slabs/napa slabs are some of the well known workable mineral deposits associated with Proterozoic sedimentary rocks belonging to Cuddapah Super Group and Kurnool Group in Kurnool district. Kurnool district

is well known for the occurrence of dolomites of Papaghni Group of Cuddapah Super group. It has a total geographical area of 17,658 sq. kms with 3 Revenue divisions which are Kurnool, Nandyal and Adoni, 54 Mandals, 53 Panchayat Samithis (Blocks) and 9 Municipalities namely Kurnool, Adoni, Yemmiganur, Guduru, Atmakur, Nandikotkur, Dhone, Nandyal and Allagadda. 899 Gram Panchayats which include 7 Notified and 863 Non-Notified alongside 920 revenue villages and 615 hamlets.

The district is endowed with a series of beautiful valleys through which Krishna, Tungabhadra, Bhavanasi, Handri, Vedavathi and middle Pennar Rivers Flow. The River Tungabhadra is the most important river flowing right through the District.

The annual normal rainfall received by the district is 665 mm Southwest and northeast monsoon contributes 55% and 30% respectively. About **1, 30,156** Ha area is irrigated by canals while 1, 12,779 Ha is area irrigated through dug wells and bore wells respectively. It has ground water resources of 1.20 lakh ham.

Out of the total geographical area of 3, 40,669 ha (39.8%) of the area is covered by forests. Similarly, barren and uncultivable land is 14.5% and cultivable waste and current fallows put together is 23.3%. The net area is 8.6% to the total geographical area.

- Major crops grown in the district are paddy, jowar, bajra, cotton, sunflower, groundnut, Tobacco, Sugarcane and chillies. Paddy is the major crop that grown in the district ground nut followed by Pulses and Mangoes respectively. *“Kurnool Sona Masoori”* is a famous variety of paddy/rice developed in Kurnool district.
- **Banaganapalli mangoes** are famously known as 'Benishan' The fruit grown in the rain-fed areas contains more sugar with longer shelf life. Though the area under the Banganapalli variety mango is limited, Kurnool district assumes importance because of its origin from Banaganapalli in the district. Nawabs of Banaganapalli introduced the mango variety centuries ago which spread to every nook and corner of the State. These mangoes get Geographical

Indication (GI) tag, making Andhra Pradesh the proprietor of the variety knows for its sweetness.

- **Belum Caves** of Kurnool District is the **second largest caves in India**.
- Kurnool city is only the town which is on the **bank of two rivers**.
- Kurnool city is only the town which is **having canal on river**.
- Kurnool Medical College is the **third biggest Medical College in India**.
- Kurnool Fort i.e., Kondareddy Buruju is the **gateway of Rayalaseema**.

2. Overview of Mining activity in the District

Kurnool district, in the south western part of Andhra Pradesh, covering an area of 17,658 sq.km is situated between 14° 55' 00" and 16° 07' 00"N latitudes and 76° 59' 50" and 78° 50' 00"E longitudes. Kurnool District consists of two distinct physiographic provinces viz., the undulatory gneissic terrain with low denudational hills in the west and a sedimentary terrain with structural plateaus and homo clinical ridges and valleys in the east. The climate of this district may be described as semiarid with annual rainfall ranging from 40 to 60 cm and the daily temperature varying from 18⁰ to 46⁰C. River Krishna and its tributary Tungabhadra flow through the area in the North.

The western part of Kurnool district exposes Archaean granitic gneisses, migmatites and granitoids which are grouped together as Peninsular Gneissic Complex (PGC). Amidst the gneissic terrain, narrow linear greenstone belts (Dharwar) of Gadwal and Jonnagiri occur. This consists of metavolcanics, biotite-chlorite schist, amphibolites, hornblende schist, banded ferruginous quartzite, agglomerate and ultramafics. The K-rich granites (equivalent to Closepet Granite) of lower Proterozoic age, intruding PGC and schists are distributed in the northern part of the district. The basic dykes and quartz veins are noticed in the western part of the district mainly along NW-SE and NE-SW trends.

The Cuddapah Supergroup of rocks (Middle Proterozoic) unconformably resting over the crystalline, comprise of conglomerate, quartzite, shale limestone/dolomite and Chert. Basic volcanic flows and sills are also present within these sediments. The Kurnool group (Upper Proterozoic) of sediments which lie unconformably over the Cuddapah Supergroup, occupy a large area in the east and are represented by quartzite, limestone and shale.

The main structural features noticed in the area are folds and faults. The Cuddapah sediments show double plunging anticlines and synclines in the eastern part of the district. The ENE-WSW trending Ghani – Kalva - Veldurti fault traverses the Archean - Proterozoic crystallines and sediments.

6. Process of deposition of sediments in the rivers of the District:

The important rivers flowing in Kurnool District are Krishna, Tungabhadra, Middle Pennar, Hundri and Kunderu. Krishna River enters the district through Kudali Sangam. The river Tungabhadra forms boundary between Kurnool District of Andhra Pradesh and Raichur District of Karnataka. Hundri River joins Tungabhadra River at Kurnool town and Tungabhadra River joins Krishna River at Kudali Sangam at about 29 Kms from Kurnool.

Sediment is eroded from the catchment and transported mostly during heavy rainfall events and the associated high stream flows, particularly floods. The deposition in the Rivers mainly comprises Sand, Silt and Clay and occasionally with cobbles & pebbles near meanders. The most essential mineral is river sand widely used in civil construction works and in levelling, back filling purposes.

The Pre-Cambrian sedimentary rocks:

After the formation of the Archean rocks and the later granitic intrusions, there was a considerable time gap before the next set of rocks came to be deposited. This large time interval during which the existing rocks were subjected to erosion and partial removal by atmospheric agencies is known as Eparchaeon unconformity. Conditions favourable for the deposition of sediments prevailed in the eastern part of Kurnool district and other adjoining districts to the east when a vast area termed Cuddapah basin came into existence in this region. The sediments deposited in this after consolidation formed clayey, sandy and calcareous rocks which have been now designated as Cuddapah and Kurnool rocks where the rocks are best exposed. The Kurnool rocks are believed to have been deposited around 541 million years ago.

8. Land Utilization Pattern in the district: Forest, Agriculture, Horticulture, Mining etc

The land use categories such as built-up lands, cultivated lands, Fallow land, forest lands, water bodies and Mining Area. Satellite imagery in combination with topographic sheet of Survey of India was used for analyzing land use and land cover change detection. It is helpful for further macro and micro level planning. With the help of Geographic Information System the various land use and land cover zones are mapped, which in turn helps for decision maker for planning purpose. The crop lands are well distributed throughout and it covers 9,176.54 sq. km (51.96 per cent). Forest occupies 3,406.69 sq. km and sharing about 19.29 per cent of the total land use land cover of the study area. The built-up land occupies 1296.11 sq. km (7.34 per cent) and there was a rapid expansion of built-up lands. Barren land occupies 1881.39 sq. km (10.65 per cent). The water bodies i.e. Rivers, Canal, Tanks and Streams occupy 1897.27 sq. Km (10.74 per cent).

Land use pattern of the study area has been assessed through Remote Sensing Data using IRS-PII.

9.0 Physiography of the District

Kurnool District has a distinct physiographic units ranging from Structural hills, Plateaus, Pediplains with valleys and Plains. The highest elevation is 1108m AMSL. The important hill ranges are Nallamala trending N-S and Erramala trending E-W occupying eastern and central parts of the district.

Drainage:

Kurnool District is drained by Krishna and Tungabhadra Rivers on majority and other rivers namely Bhavanasi, Handri, Vedavathi and middle Pennar Rivers also drain to some extent. The important river that drains through the district is Tungabhadra which is perennial and flows NE direction. The drainage pattern in general is Dendritic, Parallel and sub-parallel indicating structural control.

Irrigation:

Irrigation in the district is through Major, Medium and Minor irrigation projects. There are 3 Major, 2 Medium and three Minor irrigation projects in the district. The Major irrigation projects are 1) Kurnool- Cuddapah canal 2) TBP Low level canal project, 3) Alaganuru Balancing Reservoir and 4) Aluru Branch canal with a total ayacut of 3,50,097 acres. The two medium irrigation projects are 1) Sanjeevia Sagar Project 2) Veerabhadra swamy Gudi Project with a total ayacut of 37,362 acres. Other Irrigation Projects include 1) Telugu Ganga, 2) SRBC and 3) Hundri-Neeva Sujala Sravanthi Projects. Area under irrigation through ground water is 1, 12,779 Ha., Irrigation from the other sources (13,239 ha.) and through tanks 8,264 Ha.

10. Rainfall and Climate:

The average annual rainfall of the Kurnool District is 665.5 mm, which ranges from nil rainfall in January and December to 139.6 mm in September. 11. Geology, Hydrogeology & Mineral Wealth:

The Kurnool District is underlain by different geological formations ranging in age from Archaean to Recent. Major part of the district in west is occupied by Granite gneisses, while the eastern part is underlain by Quartzites, Shales and limestones of Cuddapah and Kurnool Group. The recent alluvium is confined to the major stream and river courses like Krishna, Tungabhadra etc.,

Groundwater occurs in all the Geological formations of Kurnool District. **Crystalline rocks** develop secondary porosity through fracturing and subsequent weathering over ages and become water bearing formations. The movement of groundwater is controlled by degree of inter-connections or secondary porosity and voids. The depth of weathered zone ranges from few centimetres to 18.0 m bgl. Groundwater occurs under unconfined conditions in shallow weathered zones and under semi-confined conditions in joints, fissures and fractures. Occurrence of joints and fissures extends down to depth ranging from 20-100 m bgl. The shallow aquifers are developed through large diameter irrigation and domestic wells. The depth of irrigation wells ranges from 4-26m bgl. Irrigation wells sustain pumping of 2-4 hours per day during summer.

Consolidated Sedimentary Formation:

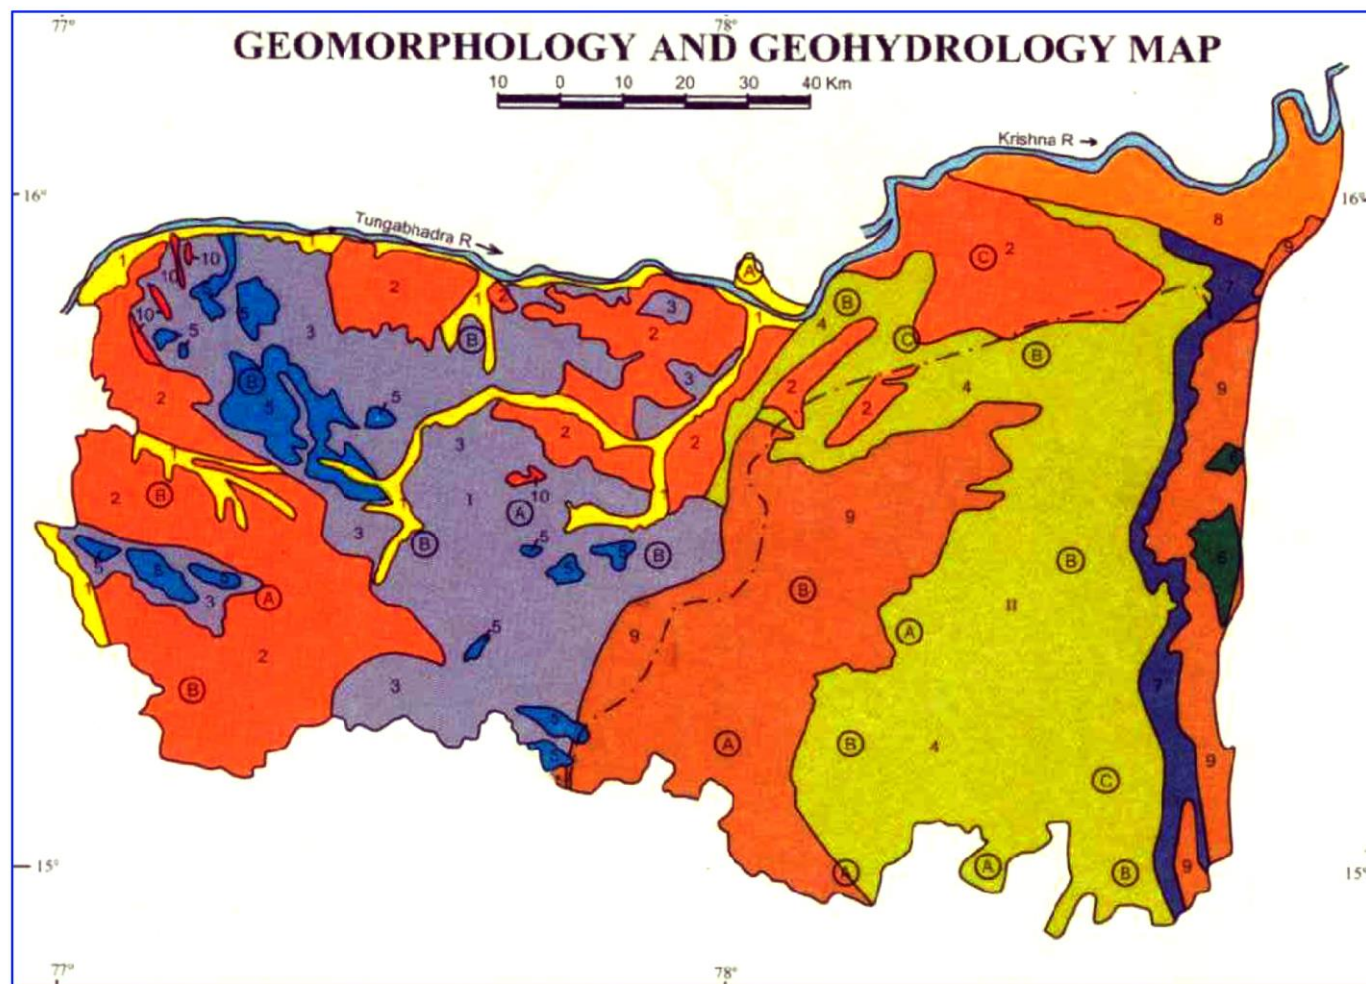

Groundwater occurs in the aquifers of Kurnool Formations in Panyam Quartzites under unconfined and semi confined conditions in weathered zone, sheared zones, joint planes and bedding contacts. The depth of dug wells varies from 7-13 m bgl, with extension of bores down to a max depth of 15 mts. The yield of wells ranges from 30-100 Cum per day. In Koilkuntla limestone groundwater occurs under unconfined conditions in the top weathered zones and karstified horizons. Groundwater occurs under unconfined condition in Nandyal Shales down to a limited depth of 30.0 m bgl. The thickness of alluvial aquifers varies from less than 1.0 m to 8.0 m and depth to water level ranges between 1.0 and 5.3 m bgl. All the Mandals in the District are classified as Safe as per GEC 2008-09.

Geomorphology: The landscape of the terrain in Kurnool District is dominated by the Erramala and Nallamalai hill ranges in the east and by low undulating terrain in the west. The various geomorphic units delineated have a direct bearing on the utilization of the terrain. The pediplains in the western part are ideal for agriculture, urbanisation and industrial development.

Geomorphologically, Kurnool District has been classified into three units based on relief, slope factor and soil. The three groups are

- i. Structural land forms – Hills & Hill Ranges and Plateaus
- ii. Denudational land forms and
- iii. Fluvial land forms

Fig: 6- Hydro Geology Map of Kurnool district

Soil types:

Soils are broadly classified as i) Zonal ii) Azonal and iii) Intra zonal types. The soils occurring in Kurnool district belong to the first and the last category. Red Sandy soils belonging to the zonal type occur in the central part of the district. These soils support good crops if properly manured. Irrigation is necessary for successful agriculture. Intra zonal soils are further sub classified as i) Deep black soils and ii) mixed red and black soils. The deep black soils occur all along the northern periphery of the district. Agriculture is generally successful in these soils. The mixed red and black soils are present in the western and eastern part of the district. They are moderately productive and give good crop yields if irrigated.

MINERAL WEALTH:

Kurnool district is well known for cement-flux-and chemical grade limestone, gold, diamonds, clay & ochre and copper ore deposits. Minor deposits of dimensional stones are also present in the district. Vempalle Formation of Cuddapah Supergroup, the Narji and Koilkuntla Formations of Kurnool Group contain huge reserves of **cement-flux-and chemical grade limestones**. These occur at Malkapuram, Betamcherla, Ankireddypalli and Paniam. **Gold** mineralisation is confined to sulphide-rich quartz veins traversing the Meta volcanics of Jonnagiri Schist Belt in Dona and Gavanikonda areas and in the Gadwal Schist belt at Bastipadu and Amadaguntla. **Diamonds** are found to occur in three different geological milieu in this district. They are located in the Kimberlites around Chelima in the conglomerates of Banganapalle Formation around Ramallakota, Banganapalle, Munimadugu, Allahabad, Tammarajupalle & Yambai and also in the gravels along Krishna river between Kurnool and Siddeshwaram.

Clay and ochre (Yellow and Red) deposits are found in Vempalle, Narji and Owk Formations at Betamcherla, Ambapuram, Ramallakota, Praema and Palakuru. Ochre as fault infillings is noticed near Veldurti. These clays and ochres can be used in the manufacture of stoneware, sanitaryware, sewer pipes and as filler in paper industry. **Copper** mineralisation occurs around Gani and Kalava in the form of disseminations within the basic intrusive and Tadpatri shales. **Lead-zinc** mineralisation associated

with copper is found in dolomite of Cumbum Formation in Chelima area. **Massive Pyrite** occurs in association with metavolcanics of Jonnagiri Schist Belt. **Specular haematite** occurs between Ramallakota and Veldurti along a fault zone. **Iron ore** reserve of 3.7 m. tons have been estimated up to a depth of 30.00 m. **Phosphorite** as pellets, fragments and nodules occurs in Cumbum Formation in Chelima-Pachcherla area. **Barytes** occurs as vein deposit in Vempalle Dolomite near Nallamekalapalli, Narayanapuram, Hussainpuram, Rangapuram, Kamalapuram, Erraguntla and Ramapuram. **Vein barytes** at the contact of basic sills with Tadpatri Shale is reported from Peddapaya and Boyanapalle. Near Chinna Ahobilam barytes veins are located along fractures/shears within Bairekonda Quartzite. Apart from the above mineral resources, this district has abundant reserves of **dimensional stones**. **Flaggy limestone** popularly known as “**Cuddapah Slab**” is extensively quarried at Betamcherla for flooring purpose. **Dolomite and serpentinised dolomite** of Vempalle Formation are also used for this purpose. **Pink granite, Gneiss and Dolerite** occurring in and around Adoni, Billekallu, Krishnagiri, Jonnagiri and Peravali are used as **Dimensional Stones**.
