Bhilwara District Survey Report

CHAPTER 1: Introduction

Bhilwara is located at 25.35°N 74.63°E. It has an average elevation of 421 metres (1381 feet). The district has an area of 10,455 km², and a population of 2,009,516 (2001 census), which increased 26.14% from 1991 to 2001. Famous for its textile & minerals industries. It is bounded on the north by Ajmer District, on the east by Bundi District, on the south by Chittorgarh District, and on the west by Rajsamand District.

Topography

The district generally consists of an elevated plateau. The eastern position of the district as a cluster of hills. The district is intersected by the Aravali ranges at several places. There is a range of hills in the North-East corner of the district which extends right upto jahajpur town. These ranges are predominant in the south east in Mandalgarh tehsil and in the north east in Jahajpur tehsil. The soil of the district varies from sandy loam to heavy loams. The District Bhilwara has a hot dry summer and bracing cold winter. The cold season is from December to February and is followed by hot summers from March to the last week of June. The south west Monsoon season which follows, last till about mid September. The period from mid September to about the end of November constitutes the post monsoon season.

Rainfall and Climate

Mean annual rainfall (1971-2012) of the district is 635.1 mm whereas normal rainfall (1901-70) is lower than average rainfall and placed at 603.3. Almost 95% of the total annual rainfall is received during the southwest monsoon, which enters the district in the last week of June and withdraws in the middle of September. Probability of average annual rainfall exceeding 900 mm is only 10%. However, there is 90% probability that the average rainfall will be more than 400 mm. The probability of occurrence of mean annual rainfall is 45%. Drought analysis based on agriculture criteria indicates that the district is prone to mild and normal types of droughts. Occurrence of severe and very severe types of droughts is very rare. Average annual rainfall for last 10 years in the district is shown in Table 3. January is the coldest month with mean maximum and minimum temperatures being lowest at 22.20C & 7.30C. Temperature in summer month of June reaches up to 460C. There is drop in temperature due to onset of monsoon and rises again in the month of September. Atmosphere is generally dry except during the monsoon period. The humidity is highest in August with mean daily relative humidity at 80%. The annual potential evapo-transpiration in the district is 1495 mm and is the highest in the month of May (228 mm).

Geomorphology

Bhilwara district consists of fairly open plains in the north and southeast with a few hillocks and undulating plains & hills in the south and northeastern part. Occasional inselberg, low-lying hillocks and chains of ridges break the monotony of peneplained tract. The area of the district generally slopes gently except in western & northwestern part where slope is high.

Drainage

Many rivers meander their way through the Bhilwara district of Rajasthan. Bhilwara district falls in the Banas (9157.2 sq km), Chambal (1164.9 sq km) & Luni basins (133.0 sq km). Major River of the district is Banas, which flows in northeast to easterly direction. It enters near village Doodiya in Bhilwara tehsil in the west flowing towards east and takes an abrupt turn towards north-northeastern direction near Bigod downstream of the confluence with Berach River and again takes an easterly turn near Kanti and finally flows towards northeast till it enters Tonk district. Total length of the Banas River is 142 km in Bhilwara district. Channel pattern of Banas is sinuous and changes to more or less straight between Bigod and Rajamahar indicating structural control on the drainage pattern. Important tributaries are Berach, Kothari, Unli, Mendi, Nakadi, Chandrabhaga and Khari River. All these are ephemeral. There is no natural lake in the district but there are number of ponds and dams.

Soil

Soils of the district are classified as follows: Clay loam or medium black: This type of soil is found in the hilly areas in the central parts of the district. Loam: This type of soil is found in the entire district. Sand and sandy loam: This type of soil is found mostly near the banks of rivers and nallahs. Loam pebbly & stony: These types of soils are met within the hilly areas of the eastern blocks of the district.

Road connectivity

National Highway No. 79, part of the Golden Quadrilateral (four lane), and another National Highway No. 76 part of the East West Corridor (four lane) pass through the district. The total length is 120 km. National Highway No. 758 (Kota-Ladpura-Bhilwara-Gangapur-Rajsamand-Udaipur) passes through the district. The length of this highway is 146 km. and other NH 148D (Bhim-Gulabpura-Uniara). The total road length in the district was 3,883 km on 31 March 2000. With a government bus depot in the heart of the city, Bhilwara is connected to all the important cities of Rajasthan and other states. Many private service providers are available.

Rail transport

A broad gauge railway line connecting Ajmer, Jodhpur, Jaipur, Kota, Indore Junction, Ujjain, Delhi, Bharatpur, Agra, Gwalior, Lucknow, Kanpur, Allahabad, Patna, Kolkata, Chittorgarh, Udaipur City, Mavli Jn., Ratlam, Vadodara, Surat, Mumbai and Hyderabad passes through the district. Kota (160 km) is the convenient railway station to provide connectivity to the southern states of Karnataka, Andhra Pradesh, Tamil Nadu and Kerala.

Air transport

The nearest airport is at Udaipur (165 km) — approximately 2.5 hours, by road. The other nearest airport is at Jaipur (251 km) which takes about 4 hours by road. The nearest international airports are in Jaipur, New Delhi, Mumbai, and Ahmedabad.

Forest

The District is lagging behind in forest resources out of total area of 1047441 hectares the forest area is mere 77362 hectares the forest fall under the subsidiary and dry tropical category, the principal species of wood found in the district Dhokra, other types of species are Babool, Khair etc.

District wise forest area = 794.18 sq. km.

Total geographical area of district = 10,455 sq. km.

Forest Area in percentage = 7.60 %

Per Capita Forest area in Hect. = 0.04

CHAPTER 2

Over view of Mining Activity in the District

Mineral Occurrences

Bhilwara district is well known for mica mining in the country for considerable long period but after the discovery of huge deposit of lead-zinc near village Rampura-Agucha by state department, this district has attained national importance. Other important minerals available in the district are copper ore, soapstone, clay, quartz, feldspar, garnet, dolomite, calcite, limestone, silica sand, marble, granite and sandstone.

Mineral wise description is given below:

Basemetal deposits

Agucha Lead-Zinc deposits: The Rampura-Agucha lead zinc deposit is associated with high grade metamorphic rocks belonging to "Banded Gneissic Complex". It is located about 15 km. SE of Gulabpura. Since its discovery by the state department of Mines and Geology in 1977, the district has attained significance because of the deposit has huge potential. It is the richest and largest zinc deposit in India with over 60 million tonnes of ore containing +1.5% lead and +13% zinc. It occurs as wedge-shaped ore body and persists up to a proved depth of 320 m. over a strike length of 1 km. After preliminary investigation the area has been leased out to H.Z.L. which has already started exploration. A super smelter has also been set up at Chanderia near Chittaurgarh based on this deposit.

Pur-Banera Lead-Zinc-Copper belt: The lead, copper and zinc deposits of Pur-Banera belt are extending over 30 km. strike length 5 km. width from Gurlan in the south-west to Banera in north-east in form of disseminations, stringers and thin films. The basemetal mineralisation is associated with magnetite amphibolite, calc-schist and calc-gneisses. The Pur-Banera block contains indicated reserves of 1.65 million tonnes of ore with 1.05% copper while the Banera block carries an indicated reserve of 2.98 million tonnes with 1.05% copper. Further Samodi, Dewas and Devpura, blocks carry reserves of the order of 14.13 million tonnes of low grade ore containing 1.5% to 2% zinc and 1.2% lead.

Pur-Banera magnetite deposit: The banded magnetite quartzite and ferruginous carbonate rocks inter layered with mica schist occur as persistent horizon and are exposed along a series of discontinuous ridges in Pur-Banera area over a strike length of 29 km. The possible reserves of magnetite quartzite and the associated ferruginous carbonate rock are estimated to be about 45 million tonnes upto general ground level and 522 million tonnes to a depth of 50 m. below the ground level. These are expected to contain 16 M.T. and 172 M. T. of magnetite averaging 33% iron and 2.48% SiO₂. The deposit is of low grade but is amenable to beneficiation by magnetic process.

Soapstone: The soapstone deposits in Bhilwara district are one of the best grade and are located at Ghevaria, Chainpura, Kishangarh, Bagwara, Asanmata, Bhilai Kheda, Kacholia, Amargarh, Chhabria, Abhaipur, Bhunagar and near Jahajpur. The Ghevaria deposit is the single largest soapstone deposit in the country which is estimated to contain 20 million tonnes of reserves.

The soapstone occurrences are confined to dolomitic limestone / quartzite belonging to Pre-Aravallis. Two parallel ridges of dolomitic limes one extend from Ghevaria in the south west upto Jahajpur in the north east for a distance of more than 32 km. All the important deposits of soapstone in this area are located on these ridges. The soapstone occurs mainly as veins and lenticular pockets of varying dimensions. The soapstone is generally of pale greenish to light green in colour. Near surface it is off-coloured, stained yellow and red but at depth becomes snow-white coloured and also improves in quality.

Mica: The Bhilwara district is prominent through out the country as a mica-mining centre in Rajasthan. There are three mica belts in the state. The Bhilwara mica belt runs east to west and covers Bhilwara, Deoli and Tonk districts. Another belt runs from KuanriaGangapur to Mandal and the third from Kankroli to Kishangarh. The important places are Bhunas, Danta, Tunka, Mandal, Gandhi, Jamoli etc. Two to three decades back the production of mica from district was prominent but presently its production is limited owing to change in technology which replaces the use of mica with other substance.

Feldspar: Feldspar occurs in the pegmatite rock and it is being quarried & prominently occurred in Asind, Mandal Sahara, Raipur, Banera tehsils of Bhilwara district. Occurrences of Soda & Potash feldspar were reported in these tehsils.

Quartz: After Ajmer, Bhilwara district is next for the production of quartz in the state. In this district important localities are - Bakliya, Sulwara, Papdiya, Dholi, Ganeshpura, Devatri, Jakampura, Doulatgarh, Rajaji Ka Khera, Takatpura, Ratanpura etc.

Garnet: There are huge deposits of abrasive garnet (almandine) in Bhilwara district found in garnet-mica schist of Aravalli Supergroup and schist & gnessess of Mangalwar Complex. Important occurrences are found at Kadnapura, Rupaheli, Agucha Koduta, Deori and Samodi. Small quantity of gem variety garnet is also found with abrasive garnet.

Dolomite

Koshithal : There are two parallel bands of dolomite exposed over a strike length of about 5 km. and width varying from 40 to 140 m. The dolomite is crystalline, medium to coarse grained, highly fractured and jointed, white and grey in colour. Reserves of 9.3 million tonnes upto 10 m. depth of indicated category and 9.3 million tonnes upto next 10 m. of inferred category have been estimated. It contains 15 to 21 % MgO with an average -2.44% SiO₂ and 32% CaO.

Jahajpur area: Fine-grained crystalline, hard compact, grey, white pink dolomite is a major formation of Jahajpur Group of Bhilwara Supergroup. In most of the area the dolomite is talcose in nature and has been leased out. The hard, compact, fine grained, grey dolomite can be used as flux in steel industry. Some of the dolomite bands have also been identified suitable for block mining near Panchanpura and Bandha.

Kotn area: Medium grained crystalline, white, buff coloured dolomite is quarried as marble near Kanti, Kishanpura, Jetpura etc. areas of Kotri tehsil.

Mandalgarh: A small band (500 x 250 m.) of dolomite (analysing 18.92 to 21.7% MgO and 0.16 to 1.8% SiO₂) having 2 million tonnes reserve have been assessed in Mandalgarh area.

Asbestos: Asbestos occurs in ultrabasic rocks near BaranaSalwara area in Asind tehsil. About 10,000 tonne of reserves have been estimated.

Beryl: Beryl occurs in mica-pegmatites. Some of the important locations are near Tuholi, Bhunas, Jampura, Deori etc.

Flourite: Occurrence of flourite was noted near village Dantra in Asind tehsil. Fluorite mineralization is confined to fracture filling, joints, small cavities in granite and granite gneisses. There is no workable deposit in the area.

Marble: Dolomitic marble belonging to Pur-Banera and Jahajpur Groups and some calc-silicate bands found in Pre- Aravalli rocks are being worked for marble in different areas on Bhilwara distt. A brief account of different marble areas is given below:

Mujras: Mujras village is located about 15 km. southwest of Bhilwara town. Marble bands are extending for 800 m. in length and 150 to 200 m. in width. The marble is medium to coarse grained, hard compact and dull white in colour with black and brownish black bands. The area is leased out for block mining.

Jetpura: Near village Jetpura 30 to 40 mts. thick bands of crystalline, medium to coarse-grained, white to dull white marble is found. Due to intrusion of pegmatites, quartz and amphibolites, only small size blocks can be excavated from this area.

Panchanpura: It lies 15 km. south of Jahajpur where marble belt has been identified along the southeastern slope of the hill. The marble is fine-grained, white to chocolate in colour with alternate grey coloured bands. Part of the area is leased out for block mining and rest area falls in forest.

Sarankhera & Kanti Area: This area is the best known for marble in Kotri teh. of Bhilwara distt. The marble is medium-grained, fractured at top, but at depth fractures gradually becomes less and blockability improves. Owing to green bands and pattern in white colour, the marble of the area has got good market value and in fairly good demand.

Phyllite and schist: Phyllite, garnetiferous chlorite schist, fine garnet sericite schist are also being quarried and used as decorative building stone. Cut and sized tiles of Badnor area are being exported. Near village Tikar, Kishorpura and in adjoining area in Jahajpur tehsil there is a scope for mining of garnetmica schist, gamet-sericite schist, mica-chlorite schist and phyllite as decorative bulding stone.

Sand Stone: Large expanse of the upper Bhander sandstone is exposed around Menal in the south-western corner of the district to Bundi in NNE. Bijoliyan is a small town located about the middle of it and quarries have developed all around these places with greater concentration towards south and west. Sand stone is purple to reddish brown in colour with pale white bands. It is compact, massive and having quadrangular joints. The importnt mining area is Bijoliyan, Barisal, Nava Nagar, Banio-ka- Talab etc.

Silica Sand: Occurrence of silica sand in Bhilwara district is known near village Jawal in Kotri tehsil where it is found in 150x15 m. area upto 8 m. depth containing 98.60% SiO₂ and 0.44% R₂O₃. About 32400 tonne reserves of silica sand have been estimated. The area is already leased out.

Clay: Good qualiy china clay deposits are known to occur near villages Kakrolia, Bhimai Kheda, Chandpura etc. in Kotri tehsil, Jikli, Biletha, Amalda etc. in Jahajpur tehsil and Mangrop in Bhilwara tehsil covering about 67 sq. km. area and having total reserves of about 22 million tonnes.

In Mangrop area deposits of good quality China clay are found. It has analysed 47.17% SiO₂, 33.63% Al₂O₃, 1.7% Fe₂O₃, 3.26% Na₂O and K₂O. It is suitable for manufacture of sanitary wares, tiles, potteries and other uses. About 2 million tonnes of clay reserves are available in the area.

Limestone: Two distinct belts of limestone occure near Mandalgarh and Jahajpur. In addition to these there are smaller occurrences near Balev, Ampura, Karana etc.

Limestone deposit near Mandalgarh: The limestone belt extends for a strike length of 15 kms. from Ruppura to Patiyal in Mandalgarh tehsil through Daulji Ka Khera, Hamadpura, Mandiyardi, Hamiriya etc. villages. The width of the limestone band varies from 50 to 200 meters.

The deposit is of complex nature. Generally it is grey and chocolate-red in colour. Grey coloured limestone is marginal cement grade while red is shaly in nature. The deposit can be divided in 3 blocks namely:

1. Daulji Ka Khera Block
2. Hamadpura-Mandiyardi Block and
3. Mandiyardi-Patiyal Block

In Daulji Ka Khera block, limestone is exposed for 1.5 kms. strike length and concealed upto Hamadpura for further 4 kms. The width is 150 m. It is medium to fine grained and chocolate in

colour. Department has carried out investigation by putting 8 boreholes totalling 247.15 m. drilling and proved 10.63 million tonnes reserves having average 44% CaO, 1.8% MgO and 14.6% SiO₂.

In Hamadpura block, limestone is exposed for 4 kms. length with an of average 100 m. width. 8 boreholes with 265.55 m. drilling were put in the area. On the basis of drilling 16.65 million tonne limestone reserves containing 44% CaO, 1.78% MgO and 14.68% SiO₂ have been proved.

In Mandiyardi sub-block, there are two limestone bands. The northern band is exposed over a strike length of about 2 kms. with an average width of 30 m. while the southern band is exposed for 1.5 kms. and 60 m width. Drilling carried out in 3 boreholes has proved 2.38 million tonne reserves containing 44% CaO, 1.78% MgO and 14.50% SiO₂ in the prospected block. In addition to these about 4 million tonnes reserves have been inferred.

In Patiyal sub-block, limestone extends for 1 km. length and average 65 m. width. 97.50 m. drilling was carried out in 2 boreholes has proved 1.22 million tonnes reserves containing 42.70% CaO, 1.78% MgO and 16% SiO₂.

Limestone deposit near Balev-Gopalpura : Limestone occurring near Balev, Gopalpura is fine to medium grained, crystalline, white and pale green in colour. It contains 46 to 47% CaO, 4 to 4.3% MgO and 2.5 to 4.6% SiO₂. Due to its pleasing colours block mining for marble was carried out in the area.

Limestone deposits near Amargarh: Limestone deposit of Hindoli Group of Bhilwara Supergroup occurs near Amargarh village of Jahajpur tehsil. It extends for over 3 kms. in strike length from Amargarh in SW to Gelaji in NE with varying width of 20 to 200 m. It is fine to medium grained, light pink, grey and buff in colour. It contains 42 to 50.6% CaO, 0.2 to 1.4% MgO and 6.5 to 20% SiO₂.

Limestone deposit of Ampura area: This band is located about 40 kms NNW of Mandalgarh town. The limestone belongs to Bhilwara Supergroup and is exposed near village Ampura over an area of 55x250 m. Investigations carried out have revealed that it is dolomitic limestone analysing 14.10 to 21.76% MgO, 29.4 to 38.08% CaO and below 1 % SiO₂. Small limestone occurrences of 100 to 150 m. length occur near Chitamba and Naga Ka Baria village containing 48 to 54.74% CaO, upto 1.2% MgO and upto 7.70% SiO₂. About 40,000 tonnes reserves have been inferred. Occurrences of 3 kms long and 50 to 500 m. wide band of crystalline limestone has been observed near Shahpura and Narana. Spot samples indicated 42 to 47% CaO, 1.20 to 2.4% MgO and 9 to 12% SiO₂.

Granite: The granite mining was not known in the district before a decade. By the efforts of state Mines and Geology department, granite quarrying was started in the district at number of places. After launching of the Granite Policy-1994, department has identified number of granite areas in the district and were notified after delineation for leasing. The important granite areas of the district are Kidimal (Pink), Katar (Greyish pink), Bor-Ka-Baria (whitish grey), Naya Talab (cobra skin black), Rampura and Narelli (cobra black), Shivpura (cobra pink), Udai Ramji-Ka-Guda (black), Phakolia-Chitamba-Dhuwala (cobra black), Bhatewar (pink), Kameri (grey to pink), Bhita.(pink), Bhania (pink), Gyangarh (cobra black) etc.

Barytes: Occurrences of barytes have been located by the state department near villages Jipia-Dhulkhera in Bhilwara tehsil in the form of medium to coarse grained, brownish white coloured, lensoidal bands containing 2.75 to 72.90% BaSO₄. It extends from northwest of Dhulkhera to east of Kheri over 1350 m. strike length and 10-20 m. width. About 1/3rd (i.e. 350 m.) part falls under reserve forest and 2/3rd (i.e. 1000 m.) part lies outside. About 0.3 million tonnes drill indicated reserves have been assessed in the part falling out of forest.
